

worried that

24 July 83

#1

- 1) CDC will go off independent
- 2) currently is one way to balls - CDC

Frustrated because:

#1

- 1) not getting interesting material early enough
- contrast French isolates
- CT 1114
- 2) Mullins CT 1114 - evidence of lack of isolation

24 July 83

#1 Complaining not getting best material from CDC

#2 Did not know or tell of HTLV-III at this time

#3 Warning CDC to not go "independently" re cause of AIDS

3 isolates examined

- #2 1 - ± HTU-1 } similar but prob
- 1 - ± HTU-1 } variant
- 1 - like MO - concerned that HTU/AHS will be MO - bubble

Hoping C can attack specific problem: ex. Humphreys, family member.

#3 "Keep away from origin of AHS independently"  
Keep in touch early

His lack of collab is more dangerous than "running away"

Bob has collab well

Ex: Havelin + Mullins have unanalyzed viruses

CT114 → Mullins Bob perenns as running in flosses stuff

Advice: 1) Cabradella - specific area  
2) Colab contact:

now appts. - 6/20, we can do it in Bob's help or hell to it.
