Dear Dick and Peter:

I enclose a complete 1981 list of the Academy including sectional breakdowns. As we discussed the section most appropriate for me would have been #41 (Medical Genetics, Hematology, and Oncology). Hilary has, however, nominated me for section 22, Cellular and Developmental Biology. This is likely to be more difficult. I have circled what I feel sure are friends in 41, and those who I hope are at least useful in 22 - just in case you have any chances.

Takas Papas has contacts to Dr. Kafatos. He is very good and respected. He is at Harvard. Takas feels he could and would really help. However, he is in Greece until early September. There is a "straw" note mid-late August. If I make it in section 22 that is the time for the contacts to key people in this section via Kafatos and Hilary or anyone else. As you see Dulbecco is also in this section.

Regards,

Robert C. Gallo
